

# AI Project Ethics Checklist

## ✓ checklist Items

- What problem are we solving, and is AI the right tool?
- Have all stakeholders (citizens, minorities, data officers) been consulted?
- Does the model use only necessary data with valid legal basis for collection (consent, contract, etc.)?
- Are we applying bias testing across gender, caste, age, income, geography?
- Is there human oversight built into high-stakes decisions (healthcare, welfare denial, criminal justice)?
- Do we have a rollback plan in case the model fails?
- Has a third-party ethics review or internal audit been completed?
